BRIDGET SPECTOR

Current Address: SMC 123, 5032 Forbes Avenue, Pittsburgh, PA 15289 (412) 511-4422
Permanent Address: 21 School Avenue, Philadelphia, PA 19111

OBJECTIVE

PROJECTS

To obtain a summer internship in the field of civil engineering that will utilize my problem solving and leadership skills.

Carnegie Mellon University EDUCATION

Bachelor of Science in Civil Engineering, May 2015

Overall GPA: 3.20/4.0

Best High School

High School Diploma, June 2011 GPA 3.82/4.0

Philadelphia, PA

Pittsburgh, PA

Cardboard Structure, Fall 2011

. Designed and constructed a cardboard bridge meant to support the average adult male.

Prepared scale models for analysis of alternatives, prior to final test.

Brick Wall Scheduling, Fall 2011

Developed a bid proposal for building a brick wall.

 Conducted time studies and generated Gantt charts to investigate most economical method of using resources.

Traffic Light Timing, Fall 2011

Conducted studies on the flow of traffic through three intersections on Forbes Avenue.

Designed more efficient traffic light cycles based on collected data.

WORK EXPERIENCE

Pennsylvania Governor's School for the Sciences Pittsburgh, PA Teaching Assistant, Summer 2012

Graded papers, fielded questions and held review sessions for Organic Chemistry.

Led a group of students in the area of Spectroscopic Analysis.

 Acted as a Residential Assistant for 90 students, providing support, enforcing dom policy, and sponsoring recreational activities.

Camp Counselor, Summer 2010

Springfield, NJ Happy Summer Camp

 Created and coordinated activities forten campers 10-12 years old. Helped administrators to set-up for parents weekend.

Jane Doe

Process Engineer Job Description: Knowing the Responsibilities and Requirements

Design and test process systems
 After assessing the industrial processes, a process engineer must design systems and processes for upgrades. Then he should operate and try the process systems.

Perform Similations.

In this process engineer job description, a process engineer has to perform process simulation by using simulation software. Later he can determine the troubleshooting issues that appear during the process simulation.

Technology Summary

Windows, Limux, Unix, Visual Studio. Net, Visual Basic 6, Ce, ASP.Net, C, C++, Java, .Net, XML/HTML, JavaScript, Ajæc, CSS, MS Office Suite

Network engineer job description sample. Network engineer job profile sample.

It begins the development of the concept and compensation studies. For example, network engineers design and create informal network systems to reflect commercial needs. 5 years of work experience such as Lader Ta © Cnico, team lar, network engineer, manager, network systems to reflect commercial needs. 5 years of work experience such as Lader Ta © Cnico, team lar, network engineer, manager, network systems to reflect commercial needs. providing export financing through its pride, guarantee and insurance programs. We give customers something different. The company demonstrates a new leadership brand, one that fosters confidence, integrity, excellence and produces high ties of a customers. Education requirements and education of Network Engineers Network Engineers must have a degree in information technology or a related field. They use their knowledge of the information technology to monitor network efficiency and provide assistance to company employees. They often have the following duties and responsibilities: maintaining computer networks, including mainframes, VPN, routines and other physical hardware, installation and configuration of network equipment creating firewalls and updating protection software of viruses and data safety systems to maintain Protected data and communications of informal systems of monitoring to improve network performance for all problems solutions, resolutions. and communication of network problems to other employees and the management of disaster recovery procedures implementation maintaining current knowledge and The understanding of the best security and networks to offer the best solutions and protection to the company's systems that transform the government's inquisition business. An advanced technology company With future vision that provides the Federal Government and selected organizations from the private sector with an impressive variety of services and solutions. Type of work: full -time payment: \$ 145,000.00 - \$ 150,000.00 for ahead: 401 (k) Packaging dental pairing pairing Health Insurance Free Time of Monitoring of the Insurance Vision Vision: Monday to Friday Experience: Linux: 1 year (preferred) Palo Alto: 3 years (required) Firewall based on the area: 2 years (required) MSP: 3 years (preferred) Palo Alto: 3 years (required) Firewall based on the area: 2 personnel to identify the best ways to structure the informal networks of a company. A network engineer generally informs the Director of Technology (CTO) or the Director of experience and the geographical location of the candidate. 4 years of work experience must include work with the OSI model and computer networks (TCP/IP, Ethernet, Vlan), Cisco iOS; Cisco Nx-Os and/or Junos; Business applications and/or data centers such as VMware, Cisco UCS, San. Create a work description of the description of network engineers who support and develop the networks used by companies and organizations. We adopt the best possible service to the government, we finally provide the best service to our birth. Throughout the day, they are reached with executives of the Compaã ± ãa and other personnel to determine new networks or additional components necessary to refine the network systems of the company. They also have an excellent written communication, which allows them to compose instruction manuals and training documents of employees on how to use the system. Exim is the Official exception of the company. Agency for the Exportation of the United States. In addition, network engineers generally occupy more senior positions Comparison with the Network administrators because they require some experience years working as an administrator before being able to qualify for an engineer role. Participate in the week you ti Operations personnel gathering to review the status of the projects and learn about the next initiatives. Experience and grades: 5 - 8 + Aã os of experience in engineering engineering engineering engineering engineering the tests, integration and liberation of The experience of business network services that provide network solutions, including the compilation of requirements, architecture design, tests, implementation and knowledge of problems and knowledge Internet security security. In a Typic day, a network administrator begins by reviewing its email and voice mail to respond to senior management messages or the employees of the lower level company. Great communication skills while interacting with federal clients and other contractors daily. Main Labor Responsibilities: Admits a large user base (more than 650 users), development equipment and service for networks, infrastructure, remote, access and registration. Work in close collaboration with inquisitive colleagues in the systems and help equipment to solve problems of the physical network engineer and a network administrator? Tasks include an interdisciplinary approach using engineering principles. Business size or organization can also determine salary rates. His work is to create a code for new or existing networks. Ability to solve problems identifying causes, collecting and processing relevant information, and recommending Switch/Router cli solutions CRT CRT FUNDAMENTAL CONCEPTS OF LAN/WAN experimenting fundamental concepts of VPN through Cisco Asas Cisco Wilc Fundamental Inceptives self -directed direction of approximation problems well with And a collaborative mentality has the ability to develop plans that consider importance, urgency, risks and the best inter -that the client advances his and the professional development of his colleagues by learning from others and sharing his knowledge and experience with others They have excellent interpersonal skills and organization excellent oral and written communication skills with specialization skills and certifications: CCNP cisco cisco prime monitoring/administration Cisco Nexus Cli Cisco asa ACS/Tacacs+ /Radius DMVPN and Tunnel Cifby Practical encrion or ccnpã ¢ â,¬ â € ¹ | The active CCIE certification is more * tests and analyzes all the elements of the network facilities * monitors and communication activities, including design, integration, installation, problem solution, repair, evidence, monitoring, reports, documents, work, work, work with appropriate suppliers and performing and performing of preventive maintenance services * performs tests, provision, operations and emergency response for ongoing network operations * Supervisa and managers the implementation of updates to the data exists entities, videos and related systems in Mãºltiple * location environment ensures that all the required operational and support documents are current * maintains a current emerging technology and tendencies in the media in line, cloud service, storage solutions and other technologies of data centers Bã Basic psychos * More than 10 years of network experience; with 2 years of specialized experience of experience and backbone IP networks in a multi-vendor multiprocol multi-vendor, including T1-based networks, T1, DS3, fiber/Ó³ptica, DSL, DSL, Ethernet and Ethernet on the copper number. * Experience with the following protocols, BGP, OSPF, VDC, VPC, VRF, VLA, VLAN, 802.1Q, QOs, Cisco ASA with active/active multiple contexts * Requires Firewall- Cisco Asa 5500x, Juniper SRX, ForcePoint Sw Sw * CISCO ENRUTORS AND SWITCH EXPERTIS LEVEL SETTING, including: 4500/6500, 3750, 3850 and ASR 1000 * Nexus 2K/5K/7K/9K Center Experience * Experience with network management applications - Cisco ACS/ISE, Cisco Prime, Solarwinds Types of Work: Full Time, Contract payment: \$ 100,000.00 - \$ 130,000.00 per a program: 8 hours Shifticense/Certification: IAT level III (required) CISSP (required) Safety space: Top secret location shows less "roles summary of roles looking at a security networks engineer that has been worked for a multiplied service provider and has an experience in the cloud. Essential work functions: it works under direct supervision, guidelines and objectives. Summary of the position: the exim team of Inquisitos is looking for a network engineer to join us in Washington, Dc. This person will be responsible for enforcing the network architecture and the network implementation standards; following compliance requirements and improves SECURITY PROSCTICS; Interfaé with business architecture services throughout the customer service life cycle; Solving level III III network support problems routing, switching, firewall, IPS, convergent and virtual networks problems); Assembly and training of team members in surrounding networks and technologies; Learn Advanced Network Technology (MPLS, OOs, Virtual Networks) and study the best practices (Cisco Data Center Design Architecture 3.0); Support to the network equipment ensuring that the standards are fulfilled; and take possession of a sense of urgency for the following best practices with network technology: infrastructure 999lan, Firewall and Security, Wan and leadership and team approach. If the network engineer will be in charge of other personnel, a candidate with supervisory experience can be ideal. Samples of work description for similar positions if this description template of the work of the network engineer is not exactly what you are looking for, see our work descriptions for these related positions: â € â €IVE ENGINEERING SYSTEMS SYST corporations, network engineers can directly inform the Executive Director (CEO). Email: alysssa@supersystemsinc. A master's degree is not required, but having an advanced title can help increase the employability of a candidate. Network engineering experiences Many employers prefer at least 5 to 10 years of related work experience for a network engineer candidate with a bachelor's degree. Inquisit is a company that demonstrates an implacable dedication and commitment to its customers and our people; a company that has been brought on a multiple occasions to clean after large integrators; a company that offers results and real tricas, versus ideas and concepts; A company that thinks that the old "80% is good enough" be tolerated in government; and a company that believes in being an administrator of the American taxpayer in everything we do. GUI development experience for the environment X-Windows Y-Windows rammed dictated. JOB Type: Complete Timepay: \$ 44,000.00 - \$ 50,000.00 per year Nengbeneros: 401 (K) 401 (K) Dental insurance employees assistance program that coincide employees assistance program REFERENCE PROGRAM Retirement Plan Visión Vis networks generally work for corporations in all industries to help their employers to Maximize communications, information storage and security. Directs the design design or mechanics to the subsystem level. It defies the appropriate tests to use in the evaluation, the purification and the verification of equipment and systems for a precise and reliable compliance to the specifications. Knowledge, skills and skills required: Red Hat Linux is is strongly desired. Prepared: Familiarity with Cisco network equipment and Red Hpe Windows Equipment Operating System Operating System Consultations. Knowledge in Microsoft Office (Excel, PowerPoint, Word) Other desired skills and experiences: Knowledge of the Terminal Flight Data Administrator (TFDM) Simple network management (SNMP (SNMP) Replacement or integration of multiple systems of the Aã © reo (NAS). Some certifications that can be valuable for network engineers include Cisco Certified Network Professional (CCNP), Cisco Certified Information Systems Security Professional (CCNP), Cisco Certified Information Systems Security Professional (CCNP), Cisco Certified Information Systems Security Professional (CISSP). and test installation, configuration, problems and network maintenance with ã © nfasis in Linux's work experience with network infrastructure, such as servers, rings and changes an excellent documentation capacity to learn tasks related to task related operations of FAA/ATC functions, As well as the ability to understand high -level architecture of the Automation Replacement System of Estandar Terminal (STARS), detailed knowledge of problems resolution skills are needed sympathy skills to replace the equipment "change components and an advanced understanding of electronic component installation and the wiring experience with software programming, networks (TCP/IP communications protocol, network programming, etc.) and computer hardware. : It helps to evaluate complex problems and investigate, develop, evaluate, select and present solutions. These people are responsible for supervising the technological systems of a company and how much they maintain daily commercial operations. Network engineers collaborate with Network engineer has an excellent verbal communication. They continually seek ways to expand their skills sets and participate in certification programs for different coding languages or techniques of informal systems. In addition, a good network engineer values the company and uses comments to develop more computers network. Summary of the position: The exim team of Inquisitos is looking for a network engineer to join us in Washington, DC. Support the network engineering team in ongoing and special projects that introduce the innovation of the network and improve the network engineer reports? Keep an environment of Cisco Unity VoIP (call the gates, CUCM, UCCX, etc.) and provide comments on the ways of optimizing the maintenance of users's permits and profiles within the VoIP environment demonstrates creative thinking of Telco's problem solution (BGP, LAC, IPSS, Mtips). An network engineer or network systems engineer is responsible for creating IT networks for companies. They also work in system updates to refine informal networks for your employer. What qualities do a good network engineer? Network engineers refer to CTO or CIO to obtain more information about the company's technology needs or receive comments on existing networks. Skills and Relations of Network Engineers Network Engineers use a variety of skills to provide more comprehensive support to organizations, which may include: Comprehensive comprehensive such as TCP/IP, OSPF and EIGRP Depth and practical knowledge of networks such as LAN, Firewalls, routers and printer Solve Wi-FI infrastructure problems and safety infrastructure to administer several projects simultaneously from the design to the implementation capacity to communicate technical information to other members of the technical team, but also to compava work eros in other departments that may not have knowledge of the salary expectations of of network networks of networks. A network engineer earns an average of \$ 98,316 per year. Required: Extensive experience in Firewalls based â € < â € < in zone and expert in Palo Alto. They can also be To create instruction manuals to help employees use the network and solve common problems. Write instruction manuals for employees or libraries of Códeigo for IT professionals so that they can navigate with A © xito the network engineer to perform equipment and animals of the entire system, functional assignments and interface of software systems and/or computer hardware of the National Space System inmate (NAS). The experience in the company includes systems engineering, business infrastructure, cybernetic security, management services and software systems engineering, business infrastructure, cybernetic security, management services and software systems engineering, business infrastructure, cybernetic security, management services and software systems engineering. Description: Inumber of tela © phonol If you call the main line, you must request to talk to me.* Authorization of ts when hiring and being considered for presentation, testing and documentation of engineering systems and equipment. Their duties include the use of your knowledge to develop companies, coordinate with the leadership of the company to identify the needs of the network effectively. Degree in informal, information technology, informal network technology, informal engineering or related or equivalent field abroad. They work closely collaboration with department leaders and IT staff to create and implement computer networks. How do we feel like this? Work with inquisition colleagues in the Firewall team to guarantee the control of access to the network and the encryption. Believe and keep of Network, SOP and another documentation Prepare exhaustive and reflective weekly status reports. Depending on the specific network configurations of the organization, it may also be required that Network configurations. The difference A network engineers obtain additional certifications. The difference A network engineer and a network administrator is its level of antiquity and specific labor responsibilities.
